FEATURES - OPERATIONS CLEANING/MAINTENANCE

WINDOW FAN INSTALLATION

Your window fan is designed to be used with a window screen in place. To install your window fan, simply position your fan on the edge of the window sill and close the window sash so that the window rests in the track on the top of the fan.

OPERATING INSTRUCTIONS

Plug the fan into a 120V AC electrical outlet.

Fan speed control settings = Off, High, Med, Low.

Electrically Reversible Air Flow: Your fan blades are electrically reversible so that you can change the direction of the air flow by sliding the switches.

- To pull in fresh air from the outside, slide both Air Flow Switches (A) to the Intake position.
- To exhaust the inside air out, slide both Air Flow Switches to the Exhaust position.
- To circulate fresh air into your home and stale air out, slide one of the Air Flow Switches to the Intake position and the other Air Flow Switch to the Exhaust position.

COMFORT CONTROL THERMOSTAT

Your fan is equipped with a Comfort Control Thermostat that you can program to turn the fan ON and OFF automatically.

- Plug the fan into a 120V AC electrical outlet.
- For the fan to turn ON automatically, you must set the thermostat to a temperature higher than the current room temperature. If the fan power is on but the fan blade(s) aren't moving, turn the Comfort Control Thermostat dial to the right until the fan blade(s) spin.
- To set your desired comfort level, run the fan until the temperature in your room is comfortable. Slowly turn the Comfort Control Thermostat dial to the left until the fan blades turn off. Your fan will maintain this temperature.

IMPORTANT: If you want your fan to run continuously, turn the Comfort Control Thermostat dial all the way to the right.

Follow these instructions to correctly and safely care for your fan.

- Always unplug the fan before cleaning or disassembling.
